

This is the real rescue club.

For all you do for our communities both home and away, thank you.

Simple Solutions for Problem Loads

Problem Loads
Connecting new loads is always a balancing act. Poorly behaved loads challenge us to eliminate their impact on existing customers. Sensitive loads must be kept on-line and in production. Both require a dependable means to stabilize line voltage.

Simple Solutions
AMSC has supplied hundreds of real-time, power inverter based voltage support installations around the world up through 138kV. Compact and easily upgraded, with line-crew familiar designs, AMSC's family of substation and pad-mounted SVC and D-VAR® products stabilize line voltages for anything that connects to your grid, from air compressors to renewable generation.

Contact AMSC to have our expert system planning team determine the best solution for your troublesome loads.

Connecting with the Wind™

Wind farm developers, operators, turbine manufacturers and utilities face many challenges when connecting with the wind. AMSC D-VAR™ technology for grid interconnection and Windtec™ turbine designs and services are proving to be the solutions of choice to meet these challenges.

Connecting with the Wind: Build your own wind turbine

Become a wind turbine manufacturer in less than 12 months. Windtec licenses combine customized designs and unlimited support to enable the manufacture and supply of multi-megawatt, high performance wind turbines. Manufacture all major components and assemble the entire turbine in-house. Gain turn-key project capabilities including installation and commissioning, and be completely independent in operation and maintenance. Windtec makes sure your needs are met from design concept, through full-scale manufacturing.

Connecting with the Grid: Meeting Interconnection Standards

AMSC's D-VAR system helps developers, operators, and utilities meet wind farm interconnection standards. A fully integrated, inverter-based reactive compensation system (STATCOM), D-VAR technology provides an extremely cost-effective solution that includes steady-state voltage regulation, power factor correction and low-voltage ride-through capability for the entire wind farm. AMSC's D-VAR system is the solution of choice for wind farms around the globe for grid interconnection and compliance with reliability rates.
